

Please note that any modifications to the forbidden settings will result in disqualification, especially if they reduce simulation speed. We appreciate your understanding. No exceptions can be made to ensure fairness for all participants.

You should see your simulation speed results by following these steps:

1. Download the project [here](#)
2. Download a copy of the instructions [here](#)
3. Extract the Zip file to a temporary folder
4. Modify any settings you might find useful to speed up the simulation, except the forbidden ones stated above
5. Press Play
6. Go to Project > Settings > Output Files > Log File > View
7. Search for both "Processing NC program file:" and calculate the elapsed simulation time.

Please note that removing vericut.log in Project > Settings > Output Files > Log File does not reduce the simulation time.

Once you believe you have reached your fastest simulation speed follow these steps:

1. Create the file summary .zip
2. Upload it to our secure FTP no later than May 8, 2026 using this link:
<https://support.vericut.com/upload/>
3. Enter this information in the form:
 - **Your Name:**
 - **Your E-mail:**
 - **Your Company ID:**
 - **Your Company Name:**
 - **To E-mail Address:** simspeedcup@cgtech.com
 - **Subject:** VUE 2026 Simulation Speed Competition
 - **Vericut Version:**
 - **Description of File:** your best elapsed simulation time in seconds (it won't be used by judges to rank your performance but will help them understand the performance of your hardware)

We would like to present the results of the competition (unless winners wish to remain anonymous) and talk about key points used to improve simulation speed during VUE 2026 sessions.

Don't have sleepless nights before the deadline, as your health is more important than anything else.

Good luck!
